design manufacture service

Project Signage specialise in sustainable, durable and easy-to-install signage solutions for public and government spaces.

Whether you need versatile bollards for town centers, robust wayfinding structures for busy walkways, or elegant signage for parks and reserves, we have you covered. Each product is meticulously designed to blend seamlessly with its environment while offering exceptional visibility and customisation options.

With Project Signage, you get more than just signs – you get smart, modern, sustainable and Australian made solutions that communicate effectively and elevate the aesthetic of any space.

Durability & Resilience

Our signage structures, crafted from our suppliers Wood Plastic Composite, are built to endure the harsh Australian conditions. They offer exceptional resistance to chemicals, stains, UV exposure and moisture, ensuring long lasting performance with minimal upkeep.

Sustainability & Safety

Constructed using 100% Australian-sourced recycled and reclaimed materials, our products align with environmental goals while being user-safe, featuring smooth and splinter free surfaces with no sharp edges.

Rigorous Testing

Subjected to comprehensive testing for flexural strength, compression, water absorption and more. Our structures promise robust performance and structural integrity. Enhanced fire resistance provides additional security for outdoor use.

Comparison Advantages

Compared to traditional hardwood, our materials excel in insect resistance, flexural strength and maintenance ease, making them a superior and eco-friendly option.

These features ensure our signage structures are reliable, safe and sustainable for various applications, addressing both functional and aesthetic needs.

All safety data and testing sheets are available upon request.

Installation instructions can be found on our website along with instructional videos. Visit projectsignage.au
